APPLICATION:

Since its beginning in 1960, Unitron has specialized in the design and development of reliable solid-state power systems for military applications. Through an innovative design, Built-In Test Equipment (BITE) and modular construction, Unitron products assure maximum power availability and minimal repair time.

The JetLinkSys Series includes lightweight 400Hz, 28VDC, or 270VDC GPUs for aircraft ground power applications in the hangar or ramp area. The JetLinkSys Series is a two enclosure system consisting of a URV Series Cable Handler and either a UFC or UDC Series Ground Power Unit, both mounted either individually or on a common mounting base available on a 4, 12, or 18inch stand (18inch stand recommended for hangar applications.) Other common mounting options for the JetLinkSys Series are towable and overhead.

Output power ratings for the Ground Power Unit (GPU) range from 20kVA to 180kVA. Larger power ratings are available in towable, fixed and bridge-mounted configurations.
